

**ABSTRACT OF THE DISCLOSURE**

5           A valve override system for allowing a user to restore flow  
through a gate valve that has failed in the closed position. The  
valve override system includes an engagement assembly being  
designed for engaging a gate of the gate valve assembly whereby  
the engagement assembly is for urging the gate of the gate valve  
10 assembly into an open position to allow fluid to pass through the  
gate valve assembly.
